

## **Tenet Health Edutech Selects Evidex® Signal Detection and Management Platform**

*Tenet to offer global training and marketing support for Evidex*

**Santa Rosa, CA and Noida, IN – October 19, 2020** –Tenet Health Edutech Pvt. Ltd., a global health sciences training and consulting firm with a focus on pharmacovigilance and medical affairs, and Advera Health Analytics, Inc., a market leader in cloud based, software-as-a-service pharmacovigilance solutions, today announced an agreement that will enable Tenet to integrate Advera Health’s Evidex®, a next generation drug safety signal detection and management platform, into its global pharmacovigilance training and marketing offerings.

With this agreement, Tenet’s subsidiary Cliniminds ([www.cliniminds.com](http://www.cliniminds.com)) will accelerate signal detection and management training of the next generation of pharmacovigilance professionals globally. Additionally, Tenet’s subsidiary Think-I ([www.thinki.in](http://www.thinki.in)) will offer Evidex’s signal detection and management platform to their valued pharmaceutical clients. Tenet’s clients will be able to leverage Evidex to manage safety signals, inquiries, and requests from detection through resolution, and elicit actionable intelligence from drug safety data.

“As global adoption of Evidex as a market leading pharmacovigilance signal detection and management platform accelerates, it is a priority for us to partner with leading organizations that can support the needs of our clients and prospective clients,” said Brian Overstreet, President and CEO of Advera Health. “The management team and the network of companies that make up Tenet Health Edutech are ideally suited to help us achieve two primary goals – to expand our marketing reach in India and other key global markets and to increase the use of Evidex as a training tool for the next generation of pharmacovigilance leaders.”

“After surveying the market for signal detection and management software, it is clear to us that Advera Health’s Evidex represents the next generation of pharmacovigilance software,” said Kamal Shahani, Managing Director of Tenet Health Edutech. “With this agreement, we can now offer our pharmaceutical clients and pharmacovigilance trainees an end-to-end drug safety solution that positions them for the challenges and opportunities that lie ahead in the coming decades.”

Since launching Evidex, Advera Health has been creating a next generation pharmacovigilance platform to connect disparate drug safety data sources and provide a user experience that elicits actionable intelligence from those data. The Evidex platform links to internal ICSR databases, FAERS, VigiBase, EDC, EVDAS, and other data and provides for a validated, audit ready environment to track and manage safety issues that are found in those data.

#### **About Advera Health Analytics**

Advera Health Analytics is a global leader in pharmacovigilance software, analytics, and data at the leading edge of drug safety science. Founded by a group of passionate healthcare entrepreneurs, Advera Health's mission is to mitigate risk in the healthcare system by improving the transparency and actionability of drug safety data through the curation and aggregation of large disparate datasets and the application of advanced analytics and workflow.
